Medical Aesthetic

THE SCIENCE OF GOOD SKIN

Medical Aesthetic was founded in 1984 by Nurses to bridge the gap between Medical and Beauty treatments.

Offering results driven treatments without the expected price tag, we are a customer focused company that strives to exceed our clients expectations at every touch point.

We specialise in advanced non-surgical cosmetic treatments such as anti-wrinkle injections, dermal fillers, laser facials, peels and LED therapy. Our mission is to empower our clients with the knowledge and tailor made solutions to deliver long term results without breaking the bank.

The team consists of Doctors, Senior cosmetic nurses, Dermal clinicians, beauty therapists as well our highly trained customer service team and clinic coordinators. Our focus is on customer service at all times, thus ensuring not only will your treatment results be outstanding, but your experience will be too.

Injectable Treatments

Bio-remodeling Treatments

The first of its kind, Profhilo® is a revolutionary 'beneath the skin' hyaluronic acid moisturising treatment made with the patented NAHYCO® technology. It results in a unique hyaluronic acid injectable gel, which has a prolonged stimulating activity on the dermal cells. When injected into the skin, Profhilo® stimulates the skin cell receptors to counteract skin laxity and improve and restore the skin's firmness.

One of the highest concentrations of hyaluronic acid on the market, Profhilo® not only boosts and hydrates the skin but also remodels ageing and sagging tissue.

The most common areas of treatment include the face and neck, and you can also use it for the décolletage, hands, arms, knees and abdomen area, where it would effectively treat skin laxity. The treatment is suitable for men and women and offers skin benefits for patients of all ages.

For ages 30-50, we recommend two treatments four weeks apart. Over the age of 50, we recommend the 3rd treatment. Maintenance treatments are recommended every six months to maintain results.

Collagen Stimulator Treatments

As a poly-L-lactic acid (PLLA) collagen stimulator, Sculptra helps restore the deep, underlying structure of the skin to diminish facial wrinkles. Sculptra works with your body within the deep dermis to help revitalize collagen production and help restore your skin's inner structure and volume.

As the Sculptra PLLA microparticles are absorbed, they help stimulate collagen production. Rebuilt collagen strands begin gradually, helping to restore facial volume and the look of fullness to wrinkles and folds.

One treatment for every decade of age is recommended for patients 40 and over. We recommend treatments every 12-24 months with maintenance, results last up to 24 months.

We recommend treatments are completed six weeks apart. Aftercare is required for this treatment. Massage for 5 minutes - 5 times per day - for five days.

Anti-wrinkle Treatment

Anti-wrinkle injections consist of type A injections, which are composed of a natural, purified protein. Once inserted into the muscle, the product is quickly absorbed. It then begins to inhibit the transmission of signals between nerves and muscles, which ultimately stops the muscles from contracting and forming wrinkles, eventually leading to a younger,

fresher look. There's no downtime and the process takes as little as 15 minutes to complete with effects can last up to four months. Best results are achieved when anti-wrinkle injections are used in combination with dermal fillers in a comprehensive and personalised treatment plan.

from \$5 per unit

Suitable for forehead lines, crow's feet & smile lines, nose to mouth lines and excess sweating

After

HA Premium Dermal Filler

Dermal fillers work to restore volume to various areas of the face, such as lips, cheeks and chin. It is important to note that the hyaluronic acid gel breaks

down naturally over a period of time, with some results lasting as long as 18-24 months.

Professional Skin Treatments

Healing LED from \$79

Our 830nm Infrared LED accelerates wound healing, regenerates the cells, delivers nutrients and oxygen to the area treated, and soothes inflamed skin. A brilliant

non-invasive treatment either stand-alone or added onto any of our invasive and non-invasive treatments.

Acne & Rosacea LED from \$79

Our 415 nm blue light treats active rosacea, acne, blackheads, and congestion. This light kills off the acne-causing bacteria found on our skin. Clinical trials

using LED light therapy show an average reduction of up to 81% in inflammatory acne lesions.

Collagen Stimulating LED from \$79

Our 633nm red light therapy minimizes the production of pro-inflammatory cytokines. This anti-inflammatory effect reduces erythema, whilst also reducing inflammation. Red light therapy has also been clinically proven to stimulate fibroblasts, therefore enhancing

collagen production and turnover in the skin and resulting in healthier, rejuvenated skin surrounding acne affected area.

Professional Peels

Our Professional skin peels are the ultimate lunchtime anti-aging and corrective skin treatment. These gentle but powerful peels address a wide range of skin concerns and work to decongest pores while hydrating the skin to achieve visible, long-term results. Peels

are recommended for skin concerns ranging from rough, dull and lifeless skin to sun damage, ageing, hyperpigmentation, congestion and oily acne.

Laser Facials

Our Laser Facial uses the Medlite C6 Q-Switch technology to provide advanced skin rejuvenation. This non-ablative, non-thermal treatment uses photoacoustic technology, creating smoother, healthier skin while stimulating collagen production. Skin will

look instantly refreshed and rejuvenated, making it a great pre-event treatment. Benefits include improving skin tone and texture, brightening dull skin, reducing pore size, scarring and pigmentation, and help for treating Melasma.

V-Laser Genesis

Laser Genesis is a non-invasive treatment that can be used to improve the overall appearance of skin and assist with concerns, including fine lines, wrinkles and redness. It uses advanced laser technology to promote collagen production, providing instant rejuvenation.

The procedure can be completed on the face, neck and décolletage and is a great option to boost skin radiance before an event.

Skin Needling

Skin needling is a treatment that uses microfine needles to puncture the skin gently. This process stimulates the skin's natural healing response, producing collagen and elastin to create smoother,

more rejuvenated skin. This treatment can be used to treat a wide range of everyday concerns, such as scarring, fine lines, pigmentation, enlarged pores and congestion.

Pigmentation Removal

We have multiple devices that treat pigmentation depending on the depth and type of pigmentation present. Pigmentation is a challenging condition to treat, and we recommend using the suggested home care to prep the skin. The laser used in treatment

shatters the pigmentation, which creates a wound within the skin, causing the area to appear darker. A crust will form on the pigmented lesion and take up to 14 days to flake away.

***Multiple sessions may be needed for best results.**

Vascular Removal

We use a combination of longer wavelength (1064 nm) and shorter wavelength (532nm) devices to reach both superficial and deeper layers of the skin when performing vascular removal. Our devices treat a broad range of vessels, from tiny spider veins to deep blue reticular veins, quickly, safely, and effectively. Patients with dark, light or tanned skin can experience

outstanding results. Multiple treatments may be required to achieve optimal results because there are various causes of redness and small facial veins. Other indications include Cherry angiomas on the face and body, Poikiloderma (or sun damage) on the neck, décolletage and red acne scars.

Speciality laser hair removal

What causes Facial Hair?

Facial hair on females is caused by both hormonal changes, as well as ethnicity. Women of some cultures more commonly experience a soft fine hair growth over the face and neck which they choose, while other women may only experience hair growth in the lip, chin and side burn area. Regardless of the cause, laser hair removal is a fast, quick and affordable long term solution to remove and reduce hair growth on the face.

The number of treatments recommended will vary from person to person, and depending on the cause. We recommend considering laser hair removal to a long

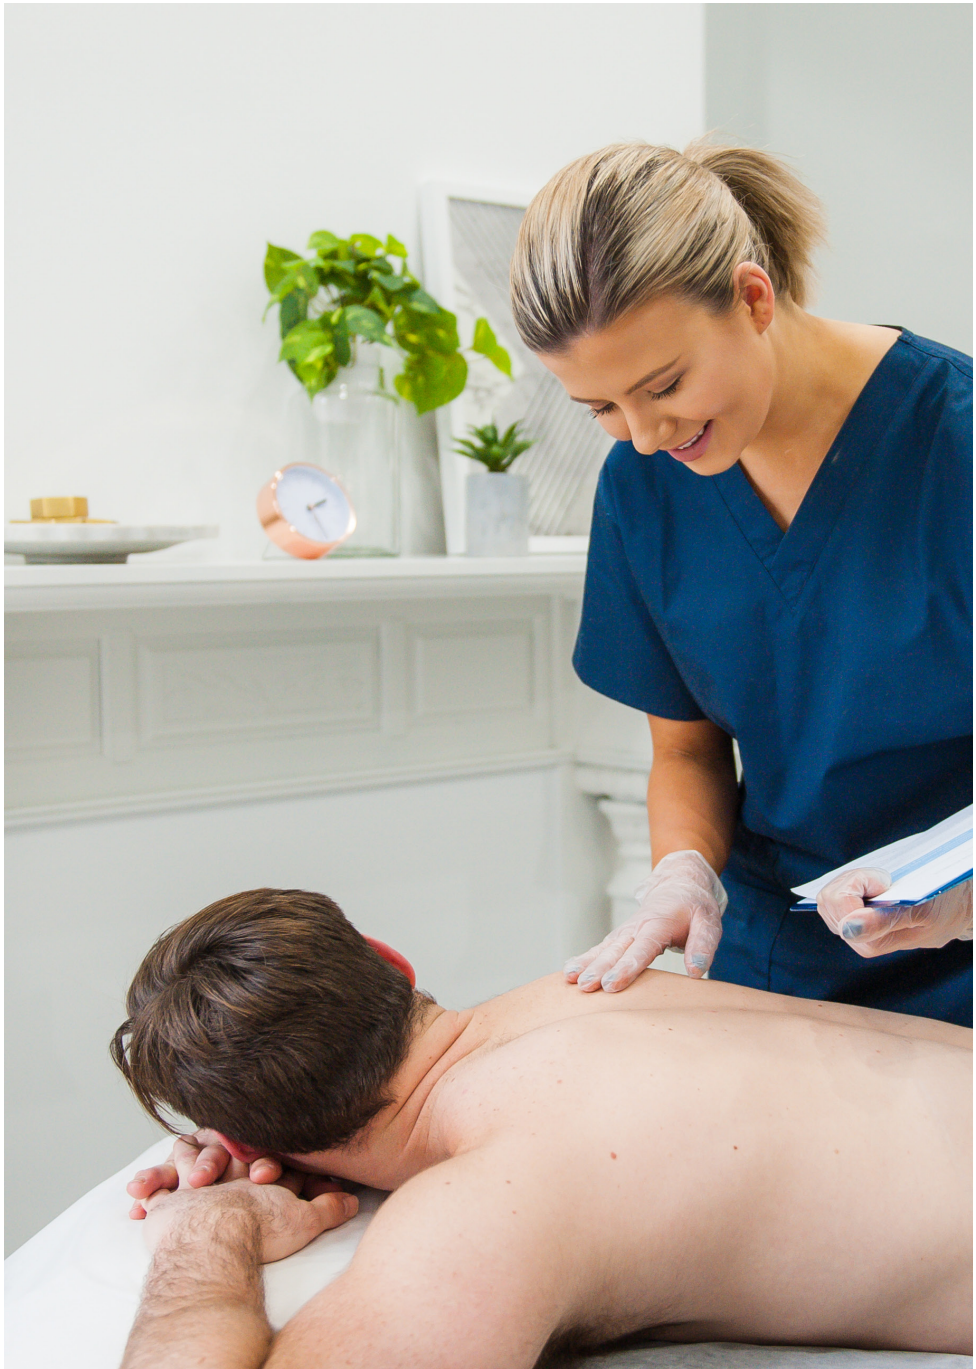

term hair removal method, starting with a course of 6 treatments then followed by maintenance treatments every 4-8 weeks ongoing.

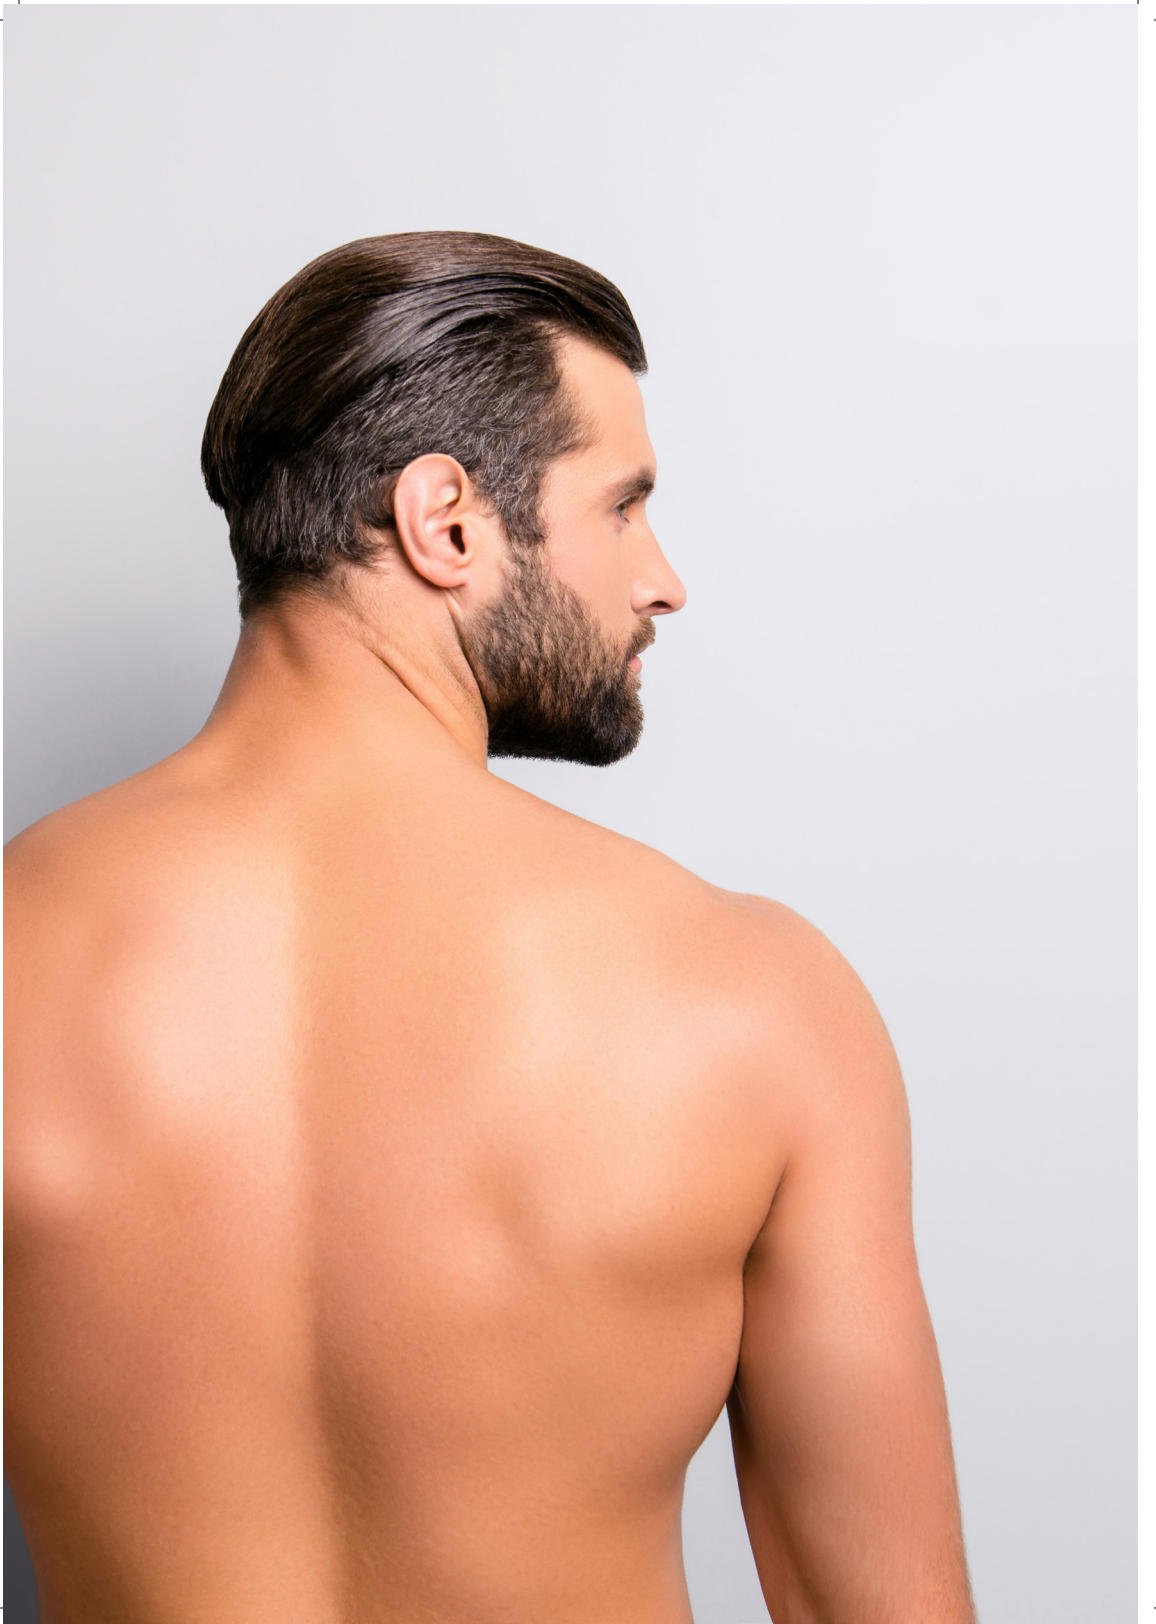

How it works

Laser hair removal works using a beam of thermal energy, gently heating the follicle. The energy is absorbed by the pigment in the follicle, which results in shedding of the hair within 7-14 days. Once the shedding has taken place, the skin will remain hair free until the next cycle of growth appears. Future hair growth will be softer, finer and grow less frequently - leaving some clients with months of smooth skin!

Common treatment areas include:

Chin, Upper Lip, Sideburns, Neck
